Pre-event Promo! Pay P4,911.00 only
 (Regular price: P5,911.00)

CONFERENCE FEES	
ISSSP Member	: P 4,911.00
Private/Regular Fee	: P 5,911.00
Government/Academe	: P 3,600.00
Regular Discount	: 5% if you send 3 or more Delegates from the same company
Pre-event Promo	: P 4,911.00 if paid on or before September 2, 2005.
PAYMENT	
Please make check payable to:	I S S S P

ISSSP is a proud member of:

Get the lead in ensuring the safety, security and privacy of your information system.

The Philippines IT Security Conference is on its 4th year and we expect the biggest gathering of not just IT Security Professionals but everyone concerned with securing and ensuring that their data and information systems are not compromised at all. That includes the CEOs, COOs, CFOs, CIOs, Auditors, Risk and Compliance Officers, IT Managers, Network or Systems and DB Administrators and the IT Professionals.... **especially YOU!**

Security is no longer a distinct and separate concern of only the security personnel in the organization. Security is, today, everyone's responsibility. That is, everyone in the organization involved in the generation, use and safekeeping of critical financial, technical and confidential business data.

In the past four (4) years, since the 9/11 terrorist attacks in New York, we have seen the growing and unprecedented damage and havoc brought about by various forms of security breach and infringement on computer data and information.

And preparation is our only recourse. The threats and intrusions, whether from the outside or from within our premises, will not wane. We can only improve and increase our ability to prevent such intrusions by creating awareness and arming our staff and personnel with the necessary security tools and know how to defend our information systems.

Get your people ready. Get yourself ready. Get to know the latest tools, methodologies and tricks in securing your information systems from the experts. Join this year's biggest IT Security Event in the Philippines, ManilaCon 2k5: privacy@risk.

Information Systems Security Society of the Philippines

Room 121 NCC Building, CP, Garcia Avenue, UP Diliman, Quezon City

In cooperation with:

4th Annual Philippine IT Security Conference

September 13 – 14, 2005

Grand Ballroom

Hotel Intercontinental, Makati City

September 13, 2005 (Day 1)	
08:30	Registration and Opening Ceremonies
09:15	ICT and Security: The Philippine scenario What is the Philippine security situation like? Are we ready as a country for a cyberattack? What about a cyber accident? And how much of our own critical infrastructure are protected from attacks from within? Care to hear of the national plan on information security and protection of privacy?
10:00	COFFEE BREAK
10:15	Information Security – A Responsive Approach What's the most you can do about securing your information system? Build your defenses! But how? It depends on who, how and when those hideous hackers and attackers start their poking and plucking of your reinforcements and fortifications ... just about now.
11:00	Unifying your defense: One for all and all for one Can various vendor tools really work together? And on a complementary manner? And how much of a security expert must you be to make the thing happen?
12:00	LUNCH BREAK
01:00	Threats From Anonymous Browsing: Bringing Home the Bug Unknowingly Cybertravel has never been more dangerous or threatening. What with unseen and undetected variants of worms, viruses and cyberbacterias poised to pounce on your every gateway stop and cyberhop. For the inadequately geared and the uninitiated, you can easily catch those deadly diseases by simply popping your mouse-head in cyberland. So, have you brought back any new breeds of decaying derelicts lately?
02:00	The Need for Secure Converged Networks Various brands and protocols. Even counter-mingling solutions to ward off the same unwanted intruder. But can you optimize security in and around the network to ensure an airtight protected environment?
02:15	Hacking in the Philippines: Why Reactive Security Is Not Enough Sure, you are prepared and ready for the defense. But is the enemy showing its face? Learn how to take the initiative and the battle to your "high ground" advantage. It's a two way street in cybersecurity, if you know which way to go.
02:45	Zero Day Attack Protection: Stopping Known and New Cyber-Hacks What's now and what's new? And when you've known them all... a few more variants come along. And this time, more devastating and intrudingly treacherous. So? Is the answer preventive medication now! Or is it new medication?
03:30	COFFEE BREAK
03:45	Live! Hacking and Intrusion Prevention In Action Let the experts show you how. The TippingPoint Security Team has volunteered to show you the whys, the wherefores and the hows... but, only if you care to come, sit still and listen.
04:15	Information Technology Forum and Panel Discussion: Intrusion Prevention vs Intrusion Detection Get your questions and answers from people who eat, drink and never sleep when it comes to information security and protection of privacy.
04:45	Quiz & Prizes (sponsored by 3Com)
05:30	3COM COCKTAILS (by invitation only)
07:00	APPRECIATION AWARDS NIGHT

Pre-event Promo!

Pay P4,911.00 only

(Regular price: P5,911.00)

September 14, 2005 (Day 2)	
07:30	CEO/CIO Breakfast Forum (by invitation only) Sponsored by Computer Associates
09:00	Managing the security issues: people, properties or you How come that even with the best of security tools, many companies continue to fail in their security protection responsibilities? Is it the staff? Are the hardware and software not enough? Or is there something you need to know and do about YOU!
09:45	Protecting your PC in Today's Digital Society Your IT staff may have protected you from external attacks. But what about from your own "loyal" staff. Find out what every CEO and business executive can do to protect valuable data from unauthorized use and access by even those "trusted" IT professionals, in your organization
10:30	COFFEE BREAK
11:00	Protecting Your Critical IT Assets: The never ending story Who says you are fully protected now? But what about tomorrow? And how do you build this never ending towering wall to get those critters and bugs out of your critical IT systems, forever? Or can you?
12:00	LUNCH BREAK
01:00	Incident Response: Call again? Who do you really call when a nasty security breach occurs? And will anything be done about it? But first, do you know how to dial 911 or what number was that again?
01:45	Forensics: Its practicable practice in the Philippines We have forensic experts in the country. Sure! But who says they can catch a thief or a cyber crawler in the dark cover of the night? Only they can tell you how!
02:30	Trends, Tools and Techniques: What's in, what's out What has worked so far? What has not? What's in the horizon? Or galloping in a dead heat at your nearest security outlet? In this session, you can look, listen, and learn.
03:15	COFFEE BREAK
03:30	IT Security Governance: Corporate or Nothing Executives must make information security an integral part of core business operations. That is, if their efforts in securing information assets is to make any significant progress in the organization. Unless... the techies have been left in charge of running the business.
04:15	Case Report on Credit Card Frauds Hear the latest bumbles and fumbles of the biggest and most secured of financial institutions. Now, would you like to know what your company or business unit can do to prevent the same from happening to you? It's all about knowing what to prepare for and how.
05:00	Information Technology Forum – Ask the Experts: One last hour for your questions to find the answers that can turn you and your business into either a secured beauty of success or an un-secured beast of failure.
6:00	MORE RAFFLES and BIGGER PRIZES
